EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lester Wallace on 9/13/2004.

The application has been amended as follows:

In the specification:

Please amend paragraph [0003] as follows:

[0003] Figure 1 (Prior Art) is a simplified diagram of a TCP packet. Figure 2 is a simplified diagram of a network interface card (NIC) 100 card called an intelligent network interface card (INIC). One of the operations the INIC performs is to read data for a TCP packet out of host memory 101 on a host computer 102 and to transmit that data as the data payload of a TCP message onto a network ~~103~~ 107.

Please amend paragraph [0006] as follows:

[0006] Once the complete header 110 is assembled, it is transferred from SRAM 111 to DRAM 105 in a relatively slow write to DRAM 105. Arrow 113 ~~illustrated~~ illustrates this transfer. Once the complete TCP packet 106 is assembled in DRAM 105, the complete packet 106 is output from DRAM 105 to the network 107. In the example of Figure 2, this transfer is represented by arrow 114.

Please amend paragraph [0025] as follows:

[0025] Although the present invention has been described in connection with certain specific embodiments for instructional purposes, the present invention is not limited ~~therefore~~ thereto. The present invention extends to packet protocols other than the TCP protocol. In some embodiments, the first part of the packet is output from the INIC before the final checksum is inserted into the packet. The combining of the DATA CSUM and the HDR CSUM need not be performed by a sequencer and the pseudoheader need not be created by a processor. Other types of hardware and software can be employed to carry out these functions in certain embodiments. In some embodiments, the pseudoheader is assembled in memory or registers inside processor 109 rather than in a separate memory such as SRAM 111. Accordingly, various modifications, adaptations, and combinations of various features of the described embodiments can be practiced without departing from the scope of the invention as set forth in the claims.
